Go to "Products & Features" -> "Import/Export Tools -> Export" -> "Raster Graphics Exchange Format (.grf)..." -> "OK". Open "C:\Users\UserName\Desktop\db_g.grf" with an editor. Open the file with all the layers selected. Save it as a.bmp file. Open Paint and import the.bmp file. Save it as a.jpg file. Open a new workbook and save it as a.jpg file. Open the.jpg file and hide all but the first sheet. Copy the x and y positions of the visible cells. (Some of the coordinate values will be negative.) Paste the x and y coordinates in the first row of the second sheet and save it. Some workbooks may show the coordinate values in negative. Example Workbook import pandas as pd import numpy as np import os import csv ''' Read the coordinate values from the first sheet. ''' # OPEN FILE filename = 'c:\\Users\\Name\\Desktop\\Autocad.csv' df = pd.read_csv(filename, sep=';', header=None, names=['value']) # ADD ANOTHER SHEET df = pd.concat([df, pd.DataFrame(np.random.randint(-100, 100, 50))], axis=1) df['x'] = df['value'] * 100 df['y'] = df['value'] * 100 ''' Import.jpg images to the second sheet. ''' # read file file_location = 'c:\\Users\\Name\\Desktop\\external.jpg' with open(file_location, 'r') as file_object: file_contents = file_object.read() # create new workbook wb = openpyxl.load_workbook(file_contents) sheet = wb.worksheets[0] # APPEND.JPG FILE TO SHEET sheet.append
