The AutoCAD standard is now maintained by the Autodesk Inc. development organization. The standard is the basis for AutoCAD. New releases are issued on a yearly basis. As with other AutoCAD releases, the first customer release of AutoCAD 2018 was released on November 8, 2017. Since AutoCAD 2017 was one year old at that time, AutoCAD 2017.1.1 was released on November 8, 2017. The current version is AutoCAD 2018, which is available to customers as either the Professional and Business editions of AutoCAD or as a Software Upgrade for AutoCAD 2017. At the time of this writing (March 2020), the standard is now AutoCAD 2018.1.4. Overview of AutoCAD AutoCAD is currently available in three versions: AutoCAD 2018, AutoCAD 2017, and AutoCAD LT 2018. The AutoCAD family includes four different AutoCAD desktop apps: AutoCAD LT, AutoCAD, AutoCAD RST, and AutoCAD ARCHITECT. These apps differ in that the LT, RST, and ARCHITECT apps support only the 'Local' and 'Remote' technology functionality. AutoCAD LT 2018 was released as a beta version in November 2017 and a general release in November 2018. AutoCAD 2017 was released as a beta version in April 2017 and a general release in November 2017. AutoCAD LT 2017 was released as a beta version in June 2017 and a general release in November 2017. AutoCAD LT 2018 was released as a beta version in October 2017 and a general release in November 2018. AutoCAD 2017 was released as a beta version in April 2017 and a general release in November 2017. AutoCAD 2018 is a fully supported general release of AutoCAD 2018. AutoCAD 2017 is a fully supported general release of AutoCAD 2017. AutoCAD LT 2018 is a fully supported general release of AutoCAD LT 2018. AutoCAD LT 2017 is a fully supported general release of AutoCAD LT 2017. The three AutoCAD 2017 desktop apps support the following two software technologies: Local and Remote. The Local software technology is designed for networked systems with users logged into the network with a connection to the AutoCAD server. The Remote software technology is designed for AutoCAD connectivity when a user is connected to a server remotely. AutoCAD LT 2018 does

AutoCAD's ability to import and export from other file formats is generally weaker than many other popular CAD programs. History In the mid-1980s, the company was initially based on a custom Visual LISP product from Visual Data Systems (VDS). As a result of the Visual LISP product, AutoCAD entered the US market in 1987, first as a CAD/CAM system (then called Computer-Aided Design/Computer-Aided Manufacturing, CAD/CAM), which handled 2D drafting. In 1993, AutoCAD was enhanced to produce a new generation of products. CAD products were enhanced to include 2D, 3D (CAD, CAE) and three-dimensional design. In 2000, AutoCAD changed its name to AutoCAD, to make it more familiar to users. It also introduced a new round icon and a redesigned user interface (UI). In 2001, AutoCAD was awarded PC Magazine's Best of the Year, and in 2005, it received the IDC Editor's Choice award, the highest award of the year. In July 2006, the release of AutoCAD 2009 introduced a new look and feel. This new version included several major improvements, including a new robust 3D solid modeling workflow, new professional 3D visualization tools, an expanded suite of measurement tools, and a new 2D Drafting package. On December 19, 2006, Autodesk acquired Vectorworks Corporation, a software-design company specializing in 3D modeling and other design technology. Some Vectorworks users were offered a special education discount to transition to the Autodesk version of Vectorworks for a period of time. Vectorworks was then included in a separate software-product line, which has been discontinued. In July 2012, Autodesk announced AutoCAD Architecture 2014, a standalone design software. In July 2013, Autodesk acquired Silicon Graphic, a provider of engineering design software solutions. The products of Silicon Graphic are integrated into AutoCAD and SilvWorks. In October 2013, Autodesk announced AutoCAD Architecture 2015. The new version was unveiled at the 2014 annual CAD conference in Dallas, Texas. In February 2014, Autodesk and Morpho, a provider of specialized information and content, announced a new Business Information (BI) and Enterprise Productivity (E-BP) suite. In August 2014, Autodesk announced the

The present invention relates to a method of manufacturing semiconductor devices, and more particularly, to a method of depositing an interlayer insulating film and a capacitor electrode used for such semiconductor devices. Conventionally, there have been used SiO<sub>2</sub> films and polycrystalline silicon films as insulating films and capacitor electrodes of DRAMs (Dynamic Random Access Memories) and capacitors of ASICs (Application Specific Integrated Circuits). However, the SiO<sub>2</sub> films and the polycrystalline silicon films used as the capacitor electrodes, as well as the insulating films, have the problems that they require high temperatures during deposition or sintering, have poor step coverage, and the like. Conventionally, capacitors are formed on the silicon substrate or the insulating film formed on the substrate in order to form capacitors with a large capacitance. However, if an interlayer insulating film is formed on the substrate, it is necessary to form the interlayer insulating film on the capacitors and the like. As a result, there arises a problem in that the capacitors cannot be formed on the insulating film in high density, or the capacitors and the like become larger. FIG. 1 is a cross-sectional view showing a part of a conventional semiconductor device. A capacitor electrode 21 is formed on an insulating film 10, which is formed on a silicon substrate 1. Furthermore, a polycrystalline silicon film 22 is formed on the capacitor electrode 21 and the insulating film 10. Furthermore, an insulating film 12 is formed on the polycrystalline silicon film 22. A via hole 13 is formed in the insulating film 10 and the capacitor electrode 21 in order to connect between the capacitor electrode 21 and the capacitor electrode 21 formed on a next layer. Furthermore, an insulating film 16 is formed on the insulating film 12, and a via hole 15 is formed in the insulating film 12 and the insulating film 16. A capacitor electrode 23 is formed on the insulating film 16 and the via hole 15. In the conventional method of forming a capacitor electrode, it is necessary to form the capacitor electrode 21 and the capacitor electrode 23 on the insulating film 10 and the insulating film 12, respectively. As a result, a capacitance formed between the capacitor electrode 21 and the capacitor electrode 23 is reduced. Furthermore, it is necessary to etch the capacitor electrode 21 and the insulating film 10 to form a via hole 13 and
