Start the Autocad application, and open a new project and save it as FZT_Kegb_leg.dwg (or whatever you want the project name to be) on your desktop. The project file (the one that opens on the right of the bottom of the window) should now be on your desktop. (It's fine if this file is still called FZT_Kegb_leg.dwg. Open the Autocad application again, and navigate to File > Open project. Click Browse, and navigate to your desktop > FZT_Kegb_leg.dwg and open it. IMPORTANT - To get the keygen key codes, you must create your own user in the following way: Choose Start > Control Panel > Add or Remove Programs > Programs and Features. In the list of installed programs, find Autodesk Autocad, and click Change. Click to remove Autodesk Autocad, and then click to add Autodesk Autocad. Click to change the name to be Autocad, and click Next. In the User name field, type the name that you want to use, and then click Next. Click Finish. Click OK when the User name and other fields are completed. Because this is a newer version of Autocad, you will need to use the older keygen methods (which is a similar process but the keygen file is different, so the keygen key code is different too). 1. To get the autocad keygen, go to the following website: It will create a keygen file (FZT_AUTH2_123456789.keyg) on your desktop. (You can open this file and copy the keyg by double-clicking it, and then paste it into your autocad file. As you copy the keygen key codes, the numbers will be assigned to the following keys: (Keyg) A A C C S S V

Markup Assist. Use the Markup Assist feature to integrate your markup styles and lists in an interactive window that automatically updates with any markup changes you make to your drawing. Download your drawings and markup changes to PDF. With the Download To PDF button you can automatically download your drawings into a PDF of your design. (video: 2:53 min.) Hybrid Fences: Easily work with both text and line drawings. Can be drawn in standard, polar and grid view and can be scoped at the level of its construction. Improved Dynamic Components: Component options that take more time to render and change the appearance of your drawing. (video: 2:02 min.) Accessing Analysis Services Data Now you can use the Access Analysis Services Data function to search, filter and sort results by content. (video: 1:45 min.) Extended File Types: You can now access your MS Project files and other PDFs and exchange them with the new Project Center and Publish To Project functions. (video: 1:40 min.) Improved Model Browser: Model Browser. You can now work with your new model browser, right in the CAD drawing. (video: 1:24 min.) Add Ins and New Template: The Python Add-In is now standard. One easy way to create custom operations, symbols, blocks, packages, components and styles with Python. (video: 1:51 min.) Publish to Google Earth: Publish to Google Earth. AutoCAD 2023 can now publish your drawings as KML files (Google Earth files) that you can view in Google Earth. (video: 1:45 min.) Communities: Collaborate on designs with friends and other AutoCAD users. Share your comments in the community forums and discuss with AutoCAD users from around the world. CAD Contours/Image Clipping: Now you can create contours or use the existing points to create a line shape. The new Contours tool, with its adjustable line width, will cut out an area from the contour by creating line

segments and line intersections. Drawn Text: A feature that allows you to draw on top of layers and other shapes. The text doesn't disappear when you change layers and can be edited. Draw dynamic
