## **AutoCAD Crack Keygen For (LifeTime) PC/Windows**

AutoCAD can import and export standard and non-standard 2D and 3D drawings to other AutoCAD and other software packages. The native format of AutoCAD is DWG (AutoCAD Drawing), which is an extension of the older DXF (Drafting Exchange Format) format. There are several file types of which the DWG file is the most common. AutoCAD has a number of specialized capabilities, including:

- Two-dimensional drawing (2D)
- 3D modeling and design
- Model-driven engineering (MDE)
- Application programming interfaces (APIs)
- Import and export Add-on applications and packages

Customization and automation

Customization/automation: AutoCAD is designed to be the most customizable and extensible software application on the market today, with a very large number of customizable and configuration options. By selecting options and features in the program settings, it is possible to build a custom

AutoCAD that matches the specific needs of your organization. Add-on applications and packages: In addition to using the AutoCAD native functionality for 2D drawing, drafting, modeling, and 3D design, it is possible to add-on to the base version of AutoCAD to create a particular solution to a specific problem. The wide variety of Autodesk add-on programs that come with AutoCAD provide the ability to create standard templates, engineering tools, technical drawing, web services, and other solutions to automate many drawing-related tasks. The combination of AutoCAD and all of the Autodesk add-on programs can create a powerful and efficient design, drafting, and engineering solution. Color management: This software helps you maintain consistency in the color across the drawings and files that are stored in AutoCAD. The color calibration and profiling is automatic and is performed when the software is first installed. After a calibration has been performed, all drawings you create or view will show colors that are consistent with the software settings. The Profile Manager tool allows you to view and edit color profiles as a Web service. The color profiles and the color calibration are maintained in the software by

the tool, and not in the drawing itself. This results in a more reliable and consistent color across

AUGI is a software development kit used for the AutoCAD software. AUGI is a software framework that makes it easier to build AutoCAD extensions. AUGI consists of tools and components that developers can use to build add-ons that can help extend the functionality of AutoCAD. AUGI consists of several tools for building AutoCAD extensions, including tools for creating drawings, editing drawings and performing other drawing-related functions. AutoCAD provides APIs for creating custom 3D modeling tools and object-specific functions. Some of these include the ability to display the cameras and lights in the 3D model in wireframe or Solid view modes, as well as showing the properties of individual meshes. Some objects also have the ability to detect the accuracy of the model, display the 3D bounding box, 3D model size, and XYZ coordinates. Some objects also have the ability to detect the angle, distance, or length of line segments. There are

---

also APIs for working with files, reading/writing database fields, setting preferences, saving/loading drawings, and creating and editing parameters. AUGI includes an API for querying drawing database tables to automate operations such as opening, closing, locking, and checking for file integrity. AUGI is also used to create drawings containing an index.

Category:Companies established in 1989Q: C# Accessing a child class from a parent class This is a bit of a general question to avoid any "don't repeat yourself" style of coding. I'm working on a system where I have several different enums that have a different meaning and effect in a class. If an enum is set to "doSomething" it calls the base class method. The problem is, because the enums are not directly related (they are not the same enum) the base class method needs to be called a second time which I don't want. I've made several different attempts but so far

---

the closest I've gotten is by using a delegate  
but that's not exactly what I want. I'd like to be  
able to do something af5dca3d97

**New Collaborative Drawing Workspaces** Create and participate in new collaborative drawing workspaces with new collaboration features.

**Easily share your work with others in these areas:**

- The Collaborative Drawing Viewer** – Share, view and comment on other people’s drawings and comments.
- Collaborative Viewer** – Share, view and comment on other people’s drawings and comments.

**Read and Write Your Existing Drawing Files** Add text, graphics and line art to drawings and edit existing drawings with the new Editor Toolbar. Remove the Quick Select Toolbar and get a clear view of the Toolbox.

**Add, rename, hide and re-arrange tools in the Toolbox.** Revisit 3D Modeling in AutoCAD with SCENE3D.

**Create and view 3D scenes in AutoCAD using a new 3D viewer in Scene3D.** Easily display models in the context of the drawing. Create and work with 3D models interactively in a 2D drawing environment, without having to convert to 3D. Models can be exported to AutoCAD in 3D, SCENE3D or DXF.

**Save Time and Avoid Errors with a New Preset System** Save your work settings as presets and access them with one click. Select any preset in the Presets Browser, configure it, and the

---

chosen settings are applied instantly. Automatic feedback for right-click commands Read the settings from the current drawing. No more need to take your pen or mouse off the drawing while you change settings. Toggle on or off the presets with the double-click of a button.
