The association of Bowen's disease and human papillomavirus (HPV) infection has been reported, but the data are conflicting. Additionally, the association between HPV and melanoma is controversial. We report here a case of a patient who had biopsy proven Bowen's disease and melanoma that were simultaneously diagnosed. Because of the presence of HPV16 DNA in the melanoma, these tumors were studied for HPV DNA presence by in situ hybridization using the biotinylated probe B5B2. Our findings indicate that HPV16 DNA may be involved in the development and/or progression of both Bowen's disease and melanoma.Hormonal and pharmacological management of headaches: a best practice approach. The development of headache usually takes a cyclical pattern with attacks being associated with hormonal fluctuations. Hence, the appropriate prescription of hormonal therapy to the patient in the early phases of treatment is crucial in decreasing the duration of the attacks. The assessment of headaches is facilitated by a rapid identification of their localising features. In nonvascular pain, the use of simple analgesic compounds, alone or associated with symptomatic treatment, may decrease headache duration.Adhesive properties of polylactide-PEG-polylactide scaffolds. Polymeric materials have been
