Recently, there have been some new features slowly rolling out to the Photoshop CC, which should be really helpful:

- Open PSD files, which is important because of the boost in productivity.
- Photoshop CC includes intelligent auto-enhancements and can apply creative filters on multiple layers.
- Some shadows can now be placed automatically.
- Layer effects can be applied to entire photographs, not just individual layers.
- Blur can be applied to parts of the photograph.
- Easy alignment and cropping with grid overlays (the paper model from the back of the box).
- An unlimited layer stack (unlike CC, which limits to 100, but new CC users need something to work with).

And in early August, Adobe also launched four Creative Cloud Studio apps specifically for iOS, macOS, and Android devices:

- Starry Night, similar to a Black & White or Grunge filter effect.
- Mono Touch, a basic monochrome photo effect that replaces colors in part of the image with lines and shapes.
- Light Pole, which replaces the object in the photo with a similar-looking light pole.
- Black & White with blur, which is basically the same as the Black & White filter, but adds a blur to the photo.
