* Multiple view modes: The "pencil" and "transparent" view modes are the most useful, since they offer the most control over viewing and editing content. * Dynamic zoom: The system can zoom in to an unlimited level, as long as it has enough room. On the other hand, zooming out is limited to a percentage of the available space. * Scrolling: The scroll bar that appears during view mode changes shows how much of the whole file you're looking at. * Selection handling: AutoCAD, e.g. can be selected and moved in both view modes, which is pretty rare in CAD viewers. * Rotation: The most important feature is rotation, since it allows you to see the content of the drawing from any direction. * Rectangle: AutoCAD's measured lines or areas can be placed with the mouse. * Line selection: If you click on a line while in pencil mode, you'll be offered to create a new line, or you can edit it using a selection window. * Layers: Enable and disable layers. * Compression: This feature allows you to set the quality (raster or vector) for the content that is being viewed. * Raster quality: The image quality of the content that is being viewed. * Color palette: You can choose which colors are in your palette for the palette bar in the upper right corner. * Font size: The default font size can be set on the Options dialog. * XRef: This allows you to automatically
