As everything comes down to preference and workflow, we have to be honest which software we prefer. Here are the main reasons we prefer Lightroom over Photoshop:

- Adobe Lightroom is one of the most powerful editing tools for photographers, and we and other take full advantage of this fact.
- It’s fast, and that makes it great for small jobs. If you don’t have a lot time to spend on the image, Lightroom and it’s quick workflow changes make it a better choice than Photoshop.
- Lightroom is easier to master than Photoshop as it is organized and easy to get your head around - you find what you need in the catalog, which makes it easier to work with.

However, the origins of Photoshop suggest that the founding plans of the company were different. Photoshop came about as a side project of a graphics group at Adobe that wanted to produce a line of graphics production software. As initial Photoshop software was very complicated, the team was given the task of simplifying the process and creating a line of graphics software in a manner similar to that of Apple's "Mac" operating system. Although Photoshop replaced the "Macintosh" line of operating systems, it wasn't until this release that the company had released a piece of software that could be called "professional".

With the above featured, you will be able to create your images in an easier and simpler manner. Start with Photoshop and be amazed. Photoshop CC and Elements are the most popular and best-selling versions of Photoshop. A year ago, the Photoshop team realized that many images captured on DSLRs and smartphone cameras in the last 10 years are likely to be the last images that were ever taken in their original format. The team set out to digitize every image ever taken by millions of iPhone and iPod touch owners. These images, and the photos shot and sent through apps like Instagram and Flickr, were saved as JPEGs to the cloud, and then, finally, began to be replaced by their original, 8-bit masterpiece files. As of today, the entire library of camera photos is scanned and converted to Photoshop and Adobe Stock format. This allowed Adobe to detect, tag, and organize the converted files into an index of every image ever taken, and ensure that upon request, the right file can be easily and automatically retrieved for editing work.
