Because each camera has its own lens, the quality of the photo depends on the lens. Lightroom, Photoshop, and many other photo editing tools work with lenses, giving you more control over your images. You can also develop your own custom lens options.

1. **Lens Correction:** A correction for reducing dust and blur in photos. If the camera isn't exactly in the center of your lens, the image may not be clear.
2. **Lens Distortion:** A correction for misalignment in the corners of the photo. Lightroom applies this adjustment in-camera, before you collect the photo.
3. **Lens Flares:** A graphical effect for creating flashes in your photos. Retro fit is a style that is currently gaining traction and can be applied to bring back an old look.
